This book is intended as a text covering the central concepts and techniques of Competitive Markov Decision Processes. It is an attempt to present a rigorous treatment that combines two significant research topics: Stochastic Games and Markov Decision Processes, which have been studied extensively, and at times quite independently, by mathematicians, operations researchers, engineers, and economists. Since Markov decision processes can be viewed as a special noncompetitive case of stochastic games, we introduce the new terminology Competitive Markov Decision Processes that emphasizes the importance of the link between these two topics and of the properties of the underlying Markov processes. The book is designed to be used either in a classroom or for self-study by a mathematically mature reader. In the Introduction (Chapter 1) we outline a number of advanced undergraduate and graduate courses for which this book could usefully serve as a text. A characteristic feature of competitive Markov decision processes - and one that inspired our long-standing interest - is that they can serve as an "orchestra" containing the "instruments" of much of modern applied (and at times even pure) mathematics. They constitute a topic where the instruments of linear algebra, applied probability, mathematical programming, analysis, and even algebraic geometry can be "played" sometimes solo and sometimes in harmony to produce either beautifully simple or equally beautiful, but baroque, melodies, that is, theorems.

From reader reviews:

Ignacio Lewis:

As people who live in typically the modest era should be upgrade about what going on or details even knowledge to make all of them keep up with the era that is certainly always change and move forward. Some of you maybe will update themselves by reading through books. It is a good choice to suit your needs but the problems coming to you actually is you don't know which you should start with. This Competitive Markov Decision Processes is our recommendation so you keep up with the world. Why, since this book serves what you want and want in this era.

William Carroll:

Information is provisions for folks to get better life, information today can get by anyone on everywhere. The information can be a information or any news even a concern. What people must be consider while those information which is within the former life are challenging to be find than now could be taking seriously which one is appropriate to believe or which one the particular resource are convinced. If you get the unstable resource then you obtain it as your main information you will see huge disadvantage for you. All those possibilities will not happen within you if you take Competitive Markov Decision Processes as your daily resource information.

Jesse Williams:

Reading a e-book can be one of a lot of task that everyone in the world likes. Do you like reading book consequently. There are a lot of reasons why people enjoy it. First reading a reserve will give you a lot of new information.
